

# ISO 45001:2018 Occupational Health and Safety Management Systems Standard

## What is it?

ISO 45001 is the first globally developed standard for health and safety management systems. It reflects current occupational health and safety management trends and techniques and is expected to eventually replace up to 24 national safety standards around the world.

## Annex SL structure

## Who is the audit for?

The new internationally recognised ISO 45001 standard is designed for any organisation that is seeking to adopt a contemporary framework for their occupational health and safety management system and who may also require external certification to confirm alignment with this standard.

## Key benefits

- Align your occupational health and safety management to current international trends
- Improve your performance by implementing the latest techniques
- Create a positive health and safety culture through demonstrable top management leadership and stakeholder participation.

## Why choose us?

Our dedicated and experienced team of auditors have been actively involved in the UK contribution towards ISO 45001 standard development. Our Head of Audit is a member of the UK national consultative body on ISO 45001 and was co-opted onto the BSI development panel of the UK guidance on the new standard.

## How does it work?

The new standard follows the high-level structure for all ISO management standards (Annex SL). Our experienced and trained auditors will assess and verify your health and safety performance against the requirements of the standard through a process of:

- On-site review of relevant documentation
- Interviews/discussions with relevant stakeholders (including top management)
- Operation sampling.

The final report will identify any non-conformances, opportunities for improvement and will recommend certification (or otherwise) to the new standard.

The certification is valid for three years subject to successful completion of (at least) annual surveillance audits.
